

SMART MOBILE

Smart Mobile is a remote alcohol monitoring device with a built-in camera and cellular modem.

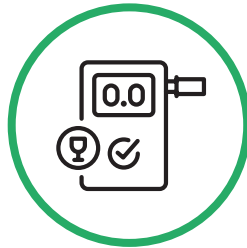

Smart Mobile calls for tests and records breath alcohol data, the date and time, and a photo of the user's face. The data is then uploaded via cellular and customised reports are emailed to the relevant stakeholders.

TEST WINDOWS

Smart Mobile test windows are completely customisable. They can be adjusted to suit any situation.

Users can take voluntary tests at any time, in addition to scheduled tests.

INGESTED ALCOHOL CONFIRMATION

If a user blows an alcohol violation, the device will ask for two re-tests to confirm it was ingested alcohol, not a mouth contaminant, e.g. mouthwash.

FACIAL DETECTION

Smart Mobile uses facial detection and photo ID. A digital image of the user is captured and stored at every test.

Photo records can be used to confirm identity in relation to tests and can be included in reports for monitoring a user's compliance.

TEST DATA UPLOADED

Successfully completed tests are uploaded to Smart Start's database server via the device's onboard cellular modem.

If a cellular signal is not available, Smart Mobile stores the data until a communication link can be established.

\$299 / MONTH*

- This price is all-inclusive covering all test window schedules including any changes that may be requested.
- Smart Mobile does not have a minimum lease requirement.
- **LEGAL AID WILL FUND SMART MOBILE WHEN THEY'RE DIRECTED BY THE COURT.**
